

KWR SMART TECH

Smart Tech is a key feature of the King William Road transformation including smart lighting, furniture, screens and parking.

MULTIPOLES

The new multipoles are integrated light poles with power and data capabilities. The new LED lights are more pedestrian focused and economical, with automated fault reporting as well as the ability to be dimmed and managed through time controls.

SMART PARKING

Smart parking sensors will be installed in each on-street car parking space along King William Road, as well as in the Boffa Street Car Park and Walter Street. The sensors connect to digital signs and Smart Parking App. This technology allows for real time parking information and better management.

SMART BENCHES

Solar bench seating features the convenience of USB and wireless charging capabilities.

IRRIGATION

To keep the new trees happy and healthy, smart irrigation features water flow and rain sensors.

SMART SCREENS

Smart Screen digital kiosks will have the ability to include precinct information, public transport timetables, weather information, points of interest/maps and community info.
