

TRANSFORMING YOUR KING WILLIAM ROAD

What you need to know about carparking

The Council, with BMD, has identified a number of initiatives to ensure easy access to conveniently located parking during construction.

WHAT IS PROPOSED

- Simplified on-street time limits
- Modifications to parking in side streets to increase total parking spaces available
- Consistent area-wide time limits on side streets (with residential permit exemptions)
- Improved wayfinding to improve access to rear parking spaces
- Staged construction footprint to minimise the loss of on-street parking during construction
- A provision of construction vehicle parking within the Construction Compound
- Increased parking management to deter all day commuter parking within the precinct

If changes are made, residents and businesses will be notified in advance.

CONSTRUCTION COMPOUND – PARKING OPPORTUNITIES DURING THE UPGRADE

To ensure parking within the precinct is available for customers, Council is seeking to provide 60 car parks for traders and construction workers at the Construction Compound located at 79-85 Mary Street, Unley. The site currently has approved use as a Construction Compound. The opportunity for increased parking use, is subject to a Development Application and approval process. Once a decision has been made, we will update the community on the outcome.
